# Researcher profile tools

## What they are

- **Tools for tracking and/or managing your online scholarly identity**
  - **Our focus will be on free tools that include citation metrics**
- **Best to look at multiple sources**
  - **Metrics are database specific**

# Research metrics

## Standard metrics are citation based

- **Item-level**
  - Measures reflecting the number of times an individual item was cited
    - Examples: Citation count, Field-Weighted Citation Impact
- **Author-level**
  - Measures reflecting the times a researcher's body of work was cited
    - Example: H-index

# Citation count in Dimensions

## Total Citations

### Prevalence of restless legs syndrome in North American and Western European populations: A systematic review

Sleep Medicine, 12(7), 623-634 - July 2011  
<https://doi.org/10.1016/j.sleep.2010.12.018>

Authors

Kim E. Innes - West Virginia University; University of Virginia Health System  
Corresponding Author

Parul Agarwal - West Virginia University

Abstract

BACKGROUND: Restless legs syndrome (RLS) is a potentially debilitating sleep disorder that affects a significant percentage of North American and European adults. Although standardized RLS diagnostic criteria are now established and widely accepted, reported prevalence estimates have varied widely. In this paper, we review the literature regarding RLS prevalence in North American and Western European adult populations, examine potential sources of variation, briefly discuss the impact of RLS, and offer recommendations for future research. METHODS: To identify qualifying studies, we searched 6 scientific databases and scanned bibliographies of relevant review papers and all identified articles. Studies including fewer than 300 participants, that did not use any of the 4 standard diagnostic criteria, were published prior to 1995 or targeted clinical populations were excluded. RESULTS: Thirty-four papers detailing results of large, population-based studies in 16 North American and Western European countries met our inclusion criteria, including 5 multi-country studies (N=69,992 participants) and 29 single country studies (N=163,188 participants); all but one were cross-sectional. Reported general prevalence rates ranged from 4% to 29% of adults, averaging 14.5±8.0% across studies. Reported prevalence averaged higher in primary care populations than in populations derived from random sampling or geographically defined cohorts (19.5±7.9% vs. 12.3±7.2%). Diagnostic and severity criteria differed considerably among studies, as did inclusion criteria, with corresponding variation in prevalence estimates. Prevalence averaged higher in women and older adults; more limited data suggest race/ethnicity, parity, health status, and other factors may also contribute to the observed variation in prevalence. RLS has profound, negative effects on health, well-being, and quality of life, yet detection rates remain low. CONCLUSIONS: Collectively, these studies indicate that RLS is a common disorder of major clinical and public health significance in the Western industrialized world, affecting between 4% and 29% of adults. The wide variation in reported prevalence likely reflects differences in demographic factors, health status, and other population characteristics; study population source and sampling frame; and inconsistencies in RLS diagnostic criteria and procedures. Prospective studies and corresponding incidence data on RLS are lacking, hindering the evaluation of both causal factors and sequelae.

Below you can see the distribution of your citations across the globe. You'll see a data point for each distinct institution with a contributor to a publication in the *Web of Science* Core Collection which cited your work.

Blue circles can be clicked to zoom in and see more precise locations, red pins can be clicked to see the details of papers citing you from a particular city.

Your citation map may take a while to load if you have more than 1,000 citations. Users within China may be unable to load their citation map due to restrictions on Google services. If you are otherwise unable to load your citation map please let us know via [our support portal](#).

# Creating Profiles: Dimensions

<https://app.dimensions.ai/details/entities/publication/author/ur.01170201235.92>

# Creating Profiles: Scopus

How is a **profile** created?

Created by Scopus

Each Scopus Author **Profile** is automatically generated using a dedicated matching algorithm that extracts metadata directly from documents indexed in Scopus. The metadata is all publicly visible information that the authors supply when they submit the documents for publication. The process links an author's name with the published documents that they authored, provided those documents are indexed in Scopus. It then organizes the publicly visible information (name, affiliation[s], subject area[s], publications, citations, co-authors, etc.) in a useful way for other researchers, librarians, and research leaders.

[https://service.elsevier.com/app/answers/detail/a\\_id/29506/supporthub/scopus/kw/profile/](https://service.elsevier.com/app/answers/detail/a_id/29506/supporthub/scopus/kw/profile/)

# Creating Profiles: Scopus

Can a Scopus Author Profile be edited? ^

Profiles are automatically created using metadata from published documents, therefore profiles cannot be changed by Scopus users. However, a user can request corrections to a profile if:

Not editable by author

- A publication indexed in Scopus has been wrongly assigned.
- The preferred name used to display the profile needs to be changed.
- A primary affiliation should be chosen from those extracted from the documents.
- Some documents indexed in Scopus are missing from the profile.

If any corrections are required, use the [Author Feedback Wizard](#) to send a request. If an

### Reviews from partners

Publons partners with journals and funders to simplify the process of getting recognition for your reviews. Whenever one of our partners provides us with review records, we can match these to the email addresses associated with your account and automatically add the review data to your profile for you.

Allow Publons to automatically add:

- All future reviews you complete for partners.
- All reviews you have completed for partners in the past, if a partner uploads that data on your behalf.

[Click here](#) to learn more about how past reviews are added to Publons.

☒ Automatically add reviews from Publons' partners

[Find out more about Publons' partnerships.](#)

### Pre-publication review display preferences

Choose default display preferences for pre-publication reviews you've written as well as those of publications you've authored. We consider the preferences of the reviewer, author, journal, and publisher before displaying a pre-publication review and will never display more information than your preferences allow. [Find out more about review display preferences.](#)

## Private Dashboard

- **Add publications**

The screenshot shows the 'Private dashboard - Import publications' page for Terry Kit Selfe. The page has a dark header with the Publons logo and navigation links: BROWSE, COMMUNITY, FAQs, and a search icon. On the right of the header are links for 'TS' and 'WEB OF SCIENCE'. Below the header, the breadcrumb 'Private Dashboard > Import Publications' is visible. The main content area is titled 'Private dashboard - Import publications' and 'For Terry Kit Selfe'. On the right, it shows 'Web of Science ResearcherID J-8183-2017'. A left sidebar contains navigation links: 'Me' (Dashboard summary, Public profile, Export Publons CV, Citation map), 'My records' (Publications, Import, Peer reviews, Editor records), and 'Activity' (Pending records, Notifications (11)). A blue tip box states: 'Tip: Completing your publication list. If you just have a handful of publications to add, try using the DOI/title import option. Otherwise, use the Web of Science, ORCID, or file upload options to complete your publication list. Don't worry about duplicates; we will detect and remove duplicated publications by title and/or DOI.' Below this is a section titled 'Import from Web of Science (complimentary access for Publons users)'. The text in this section says: 'We couldn't find any unclaimed publications in the Web of Science that match your email address and/or publishing names. Try refreshing this page after adding any other email addresses and names you've published with, or use another import method below.' A green callout bubble points to the 'Import from Web of Science' section with the text 'Import From WoS'.

# Concluding Thoughts

Numerous profiles are available

- E.g., Google Scholar, Scopus, Publons, Dimensions

Some profiles will be more complete than others

- Each database covers different journals and other publication types, so not all of your publications will be in each profile
- Some may include information others do not
  - E.g., Co-author network visualization, Citation map
- ORCID allows you to enter all of your publications
  - Not a citation database, so no metrics

If you have a preferred database for your profile, publish in journals that are indexed in that database

- Cannot add items not indexed in that database to your profile

# Concluding Thoughts

Identify which metrics best tell your story

- **Citation counts, normalized metrics, Altmetrics**
- **Use multiple sources as databases and profiles differ**

Always give context

- **Use words, not just numbers**
- **Name your source**

Go beyond the metrics

- **Highlight noteworthy impact**
- **E.g., Informed practice guidelines, policy statements**

# Recap

## Researcher profiles

- **What they are**
  - Tools to manage your scholarly identity
- **Where to find them**
  - Dimensions
  - Google Scholar
  - Scopus
  - Publons
- **Create your own**
  - Why?
  - How?
